

ML2023Spring HW1 Report

<CSIE> <許軒輔>

<410985014>

Public Score	Private Score
1.03326	1.04841

The methods I used to pass the strong baselines include:

1. Choose the most relative feature
2. Normalize the data
3. Try as much hyper parameter as you can

In HW1, I think the most important thing is to choose the right feature. By training with the high relatively feature, I got great result.
